+254 703 315007

Innovative engineer, technical writer, and mobile/ web developer seeking to use proven skills in solving specific and general business needs in the IT space.

I am a very fast learner and worker who can pick up any language/ framework and create amazing products in a few weeks.

Over the past 18 months, I have explored and can work with basic to intermediate concepts in Kotlin, Java, Spring Boot, Java-Android, HTML5, CSS3, Javascript, C, and Python! Here's my GitHub link (<https://github.com/martyn-su>).

I'm located in Nairobi and am open to working remotely for an organization or on contract. I would not mind relocation assistance if necessary.

My latest projects include a full Android app built in Kotlin and XML views. I have also completed a hotel management system for a local business in Core Java.

Willing to relocate: Anywhere

## Work Experience

---
